

CLASS	II	Description: Shared use path along Jackrabbit Lane from Elk Grove to Baxter Lane on the east and west side of Jackrabbit. Route would provide safe pedestrian access from residential to commercial and the school. While much of this route is transportation it is critical for access to recreational parks and trails like the Gallatin River or the ball fields at Monforton School. As MDOT makes additions or during new commercial development along this corridor a paved shared use path should be constructed.
